

New Product Announcement

Second Generation BMU Pro

Ecotec is proud to announce the latest in Industrial Battery Monitoring, our new BMU Pro G2 second generation battery device. The BMU G2 is Service Tool Software compatible and incorporates all the features of the original as well as several new advancements.

Improved features

The BMU Pro G2 comes with new features such as state of charge (SOC) indicator LED and low SOC alarm notifications. The time and date settings have been upgraded with an improved real time clock and battery backup – eliminating the risk of history log errors.

NFC technology

Using a BMU Pro has never been easier. Near Field Communication (NFC) technology allows the collected data from the BMU Pro G2 to be accessed through most Android phones. By downloading the free BMU mobile application, users only need to select the battery, then place their phone on the BMU to access the data directly on their smartphone. The BMU mobile application increases accessibility and saves time – streamlining the BMU configuration and download process.

BMU G2 models

The BMU G2 comes in various models to match any lead/acid battery fleet, flooded or sealed batteries, soldered or bolted connectors.

Coming Soon!

Beginning before year end the new BMU Pro G2 will supersede the original BMU Pro, with incoming orders for the original BMU Pro (PN 902012-000) being acknowledged with and replaced by the BMU Pro G2 (PN 902107-005). The new advanced BMU G2 comes at the same price and with the same installation process as the original.
